

Collection Storage, Australian Museum

The Maxitek system designed, manufactured and installed by Bosco Storage Solutions to house the Australian Museum's unique and extensive palaeontology collection was custom-built to meet the vital security and accessibility requirements of the Museum.

The Australian Museum's distinctive display possesses scientific and cultural values and content that makes it the nation's most important animal, mineral, fossil and anthropological collections, valuable resources for scientific research and for the ongoing knowledge and information of the entire community.

Challenging to the project was not just the large volume of storage required but ongoing research and maintenance mean specimens need to be temporarily relocated from the storage area to the geological preparation laboratory.

College Street, Sydney NSW

Bosco's custom-designed installation with its flexible configurations of high density drawer storage housed within the rolling shelving framework, enable movement of the actual specimen drawer from the storage area eliminating handling of these valuable resources whilst providing both secure and maximised storage.

The Australian Museum was founded in 1827 and throughout its development has assumed a prominent stature in the Sydney landscape. Located in College Street in Sydney, and with a long history of research in palaeontology, the Australian Museum anthology contains a number of the museum's treasures.

maxitek™

Innovative and flexible archive storage system

With features such as the strength of steel, sprinkler system decoy, bearings on all drawers, individual extrusions to enable clear labeling of each drawer's contents and safety thumb latches on drawers which prevents drawers from sliding open, secure handling and storage of the palaeontology collection's priceless contents is assured.

The current installation consists of 282 bays incorporating 3500 high density drawers providing 5138 m2 of storage.

With over 30 years experience in manufacturing a diversified range of storage systems, Bosco Storage Solutions appreciate the importance of functional workspaces. The museum installation includes customised configurations with elegant presentation. Our innovative and flexible archive and storage system's design options enabled the Australian Museum to satisfy their current needs with features and options for future expansion [to a drawer quantity of 6486].
